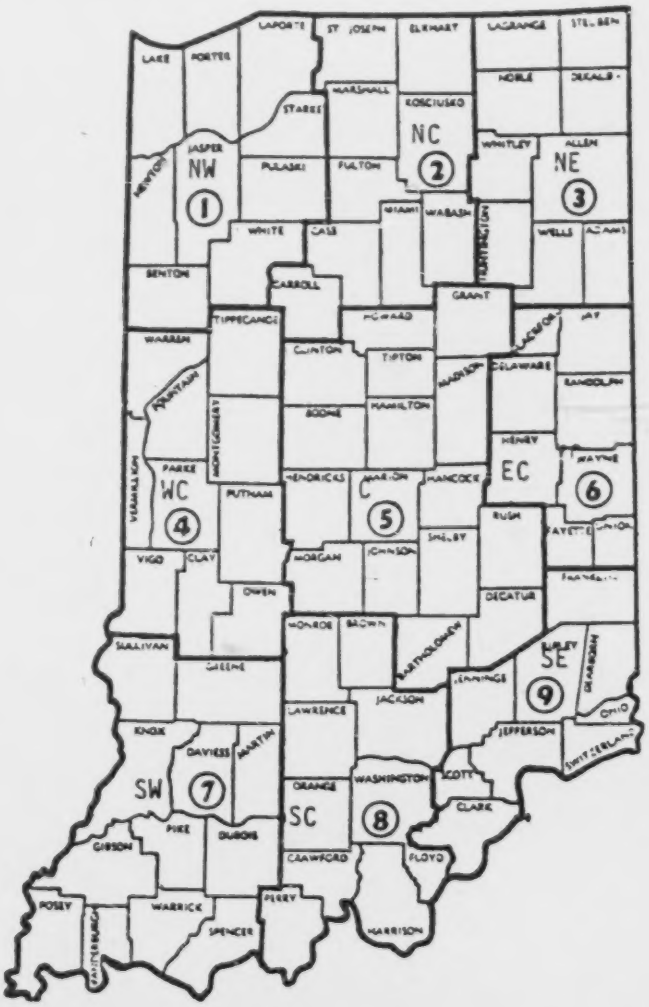
EARL L. PARK, *Agricultural Statistician In Charge*

For statistical purposes, the counties of Indiana are grouped into nine Crop Reporting Districts (shown on the map at right). These groupings represent divisions of approximately equal size with similar soils, growing conditions and types of farming.

Crop Reporting Districts are used in the compilation of most reports. It is not possible to collect sufficient data for each county to make county estimates on a timely basis. It is possible to summarize data at a district level and weight districts together by production percentages to arrive at the best State estimates.

Many data series in the bulletin present estimates for Crop Reporting Districts. Some series are further broken down into county estimates within districts.



Indiana Crop Reporting Districts

WEATHER IN INDIANA DURING 1985

Severe cold in January contributed to heavy peach bud kill for the second consecutive year in Indiana. Minimums as low as 20 to 25 below zero were recorded in all sections of the state. However, the apple crop survived the winter well. Adequate snow cover also cushioned the impact of extreme temperatures on wheat and forages.

Indiana soils were warm and wet with the arrival of January, but the month soon turned cold with fields becoming snow covered after the first week. The snow depth increased steadily to a peak coverage of 5 to 15 inches over north and central Indiana and 3 to 6 inches over the south. A solid cover carried into February and was thickened by some heavy additions during the second week. Overwintering grasses enjoyed protective cover when another episode of temperatures between 10 and 20 below zero occurred early in the month. By contrast, March brought temperatures averaging 4 to 5 degrees above normal. Minimums fell back to the teens and low 20s during the third week, but maximums reached 70s and low 80s before the month was over.

Soil tempertures at the four inch depth fell from the 40s to the 30s during January and remained there until a warming cycle occurred in the last week of February. The depth of the frozen ground layer exceeded 8 inches in north and central areas during this period, while in the south 3 to 5 inches was more typical.

Moderate snow cover persisted from mid-January to late February. An abnormally warm March then brought soil temperatures through the 40s and into the lower 50s by the first of April. Snow melt in late February followed by above normal rainfall through March kept soil moisture in surplus and northern Indiana rivers at near record heights. A rainy pattern continued into early April, but drier weather by mid month brought improvement in soil conditions and early progress on fieldwork. Last 32° readings were recorded during the second week of April. Alternate wet and dry periods through May allowed an early completion of corn planting in most areas. Spotty frost occurred in north and central sections during the first week of May, but average temperatures remained above normal for the month.

In northern Indiana, the moisture surplus soon turned to a deficit as scant rainfall plagued crops there from April through July. In the south, excess rains accumulated during late May and June, causing delays in soybean planting. Winter wheat recovered from excess spring moisture and was favored by good harvest weather in late June and July. Temperatures averaged below normal throughout the summer, keeping heat stress down but slowing crop development after the early spring start.

Rainfall became more evenly distributed by late July, and August totals were above normal throughout the state. The timely moisture kept the condition of soybeans stable and eased fears of declining yields. September rains were concentrated in brief episodes alternating with periods of good drying weather. However, another wet pattern began to emerge in October that interfered with timely harvest, especially in the north and south extremes of the state. Precipitation totals in central sections were slightly below normal in October.

An extremely wet November brought precipitation totals that were two to three times the normal, closing the doors on any late harvest operations. Fall temperatures were well above normal, but the first week of December brought minimums into teens and single figures. The latter half of December was characterized by frequent subzero readings that resulted in monthly average temperatures that were 7 to 9 degrees below normal. December precipitation was near normal over central Indiana but below normal north and south. A 2 to 4 inch snow cover developed during the latter half of the month in most north and central sections. One to 2 inch snows covered parts of the south at times.

--John W. Kottke-Agricultural Meteorologist, National Weather Service, Mid-west Ag-Weather Service Center, West Lafayette, Indiana.

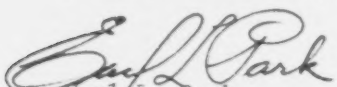
FOREWORD

This summary is the result of the continuing cooperation between the farmers and agribusinessmen of the State of Indiana, the Agricultural Experiment Station, Purdue University, and the National Agricultural Statistics Service of the U.S. Department of Agriculture. It provides the official estimates of agricultural production for 1985 together with 1984 for comparison.

Included in this report are State estimates of acreage, yield, production, disposition, and other information related to crops; production and inventory numbers of livestock, including dairy and poultry; price and farm income data; labor and wage rates; and weather and crop progress data. County estimates for major crop and livestock items for 1985, 1984, and 1983 are also included. Historic State data from 1866 to 1984 and county crop estimates from 1923 through 1979 are also available upon request.

Farming is such an integral part of the national and world economy that it cannot function effectively without reliable information on which planning and marketing decisions can be based. To meet the needs of the farmers and others involved in agriculture, statistics are made available throughout the year in the form of weekly, bi-weekly, monthly, and quarterly reports. The reports and approximate dates of release together with ordering instructions are shown on the inside back cover of this publication.

I wish to acknowledge the valuable assistance of the many Indiana farmers and operators of agribusinesses who voluntarily provide the raw data from which the official estimates are established. A special thanks is extended to the field enumerators, telephone enumerators, and to all members of the office who had a part in carrying out the surveys, evaluating the results, and establishing the estimates which are presented in this publication.



Earl L. Park
Statistician In Charge

The above estimates of Growing Degree Days (GDD) Normals are derived from normal temperatures at mid-month and the corresponding GDD. Temperature and GDD relationship come from a computer run of 20 years (1949-1968) using Indianapolis data. For example, a weekly average temperature of 60° F. resulted in 84 GDD. The basic formula is: 1/2 (max. T. - 50) + 1/2 (min T. - 50) = GDD for one day. The maximum temperature is not allowed to exceed 86 degrees F. Negative units are not accumulated.

CROP HIGHLIGHTS

Acreage: Indiana's six major field crops in 1985 totaled 12.6 million acres, 2 percent less than the 1984 level. The acreage of corn and soybean both increased by 2 percent while oat acreage was up 50 percent. More than offsetting these increases, however, was a 34 percent decrease for winter wheat acreage; a 30 percent drop for rye; and a 2 percent decline in hay acreage. Alfalfa hay was down 2 percent and all other hay was off 3 percent. Other crops showing acreage decreases were tobacco, off 20 percent, potatoes, off 6 percent, peppermint, off 24 percent and spearmint, off 7 percent. Processing tomato acreage was down 11 percent, but fresh market tomatoes were unchanged, and snapbeans were up 7 percent.

Yields: Excellent growing conditions during 1985 resulted in record high yields for soybeans, wheat, oats, rye and hay. At 123 bushels per acre corn yields were the second highest on record, 3 bushels less than the 1982 record high. The soybean yeild was 41.5 bushels compared with the previous record of 38.5 bushels in 1982. Winter wheat yielded 53 bushels per acre, 2 bushels above the previous record set in 1983. Oats yield was 69 bushels, 4 bushels above the previous record of 65 bushels set in 1980 and 1981. Rye, at 28 bushels tied the previous record high yield set in 1984. All hay yields, at 3.13 tons per acre was also above the previous record of 3.08 tons set in 1982.

Production: The record high soybean yield also resulted in a record high production totaling 185.1 million bushels. The previous record was 173.3 million in 1982. Corn was up 7 percent from 1984, soybean production up 23 percent, oat production up 53 percent, hay production up 6 percent, and apple production up 17 percent. Crops with declines in production included wheat, off 23 percent; rye, off 8 percent; tobacco, off 23 percent; potatoes, off 8 percent; peppermint, off 37 percent, and spearmint, off 31 percent.

24/ Estimates discontinued in 1985.

THE 1985 CROP SEASON IN INDIANA

The final estimate of the 1985 season places Indiana's corn production for the year at 756.5 million bushels, up 7 percent from the 705.5 million bushels produced in 1984 and more than double the 1983 drought-stricken crop of 340.9 million bushels. Acres harvested totaled 6.15 million, up 2 percent from the previous year's 6.03 million acres. Also contributing to the higher production was the 1985 yield of 123 bushels per acre, a 6 bushel increase from the previous year. The 1985 corn crop was valued at $1.82 billion, down 1 percent from 1984. The average price per bushel of $2.40 is down from the 1984 $2.60 price per bushel.

Soybean production totaled 185.1 million bushels, up 23 percent from 1984. The yield was 41.5 bushels, 7.0 bushels greater than in 1984 while the harvested acreage of 4.46 million acres was up 3 percent from the previous year. The value of the soybean crop was $953 million, up 8 percent from 1984 with an average price per bushel of $5.15.

Indiana's 1985 wheat crop amounted to 37.1 million bushels, down 23 percent from 1984. While the acreage harvested at 700,000 was down 33 percent from last year, the yield was a record high 53.0 bushels per acre, 2 bushels above the previous record of 51.0 bushels per acre set in 1983 and 7 bushels above the 1984 yield. The value of the crop was expected to total $107.6 million, with an average value of $2.90, a 35 cent decrease from 1984.

Hay production, at 2.49 million tons, increased by 6 percent from 1984. The 795,000 acres of hay harvested were 20,000 acres less than the previous year and the yield per acre of 3.13 tons per acre was up .25 ton per acre from 1984. The value of the hay crop was $127.9 million, down 13 percent from 1984. The average value per ton, at $51.50 was a sharp drop from the $62.50 realized in 1984.

Tobacco production totaled 14.6 million pounds, down 23 percent from the previous year. Harvested acreage of 6,500 was down 20 percent from 1984 and the 2,240 pounds per acre yield was down 80 pounds from the previous year. The value of production was $22.9 million, making tobacco Indiana's fifth most valuable crop.

Apple production in 1985 totaled 75 million pounds, an increase of 17 percent from 1984. The total value of utilized production was $9.8 million, a 17 percent increase from the previous year.

Indiana's 1985 oats production was 8 million bushels, a 53 percent increase from a year ago. The yield was 69 bushels per acre, a 7 bushel advance from 1984. Harvested acreage, at 110,000, was up 38 percent from last year. The average price per bushel, at $1.50; dropped 51 cents from 1984.

The 1985 potato production in Indiana, at 890,000 cwt., was down 8 percent from 1984. The yield of 198 cwt. per acre was down 3 cwt. from the 201 cwt. of 1984. Total acres harvested, at 4,500, was down 6 percent from the previous year. Potato prices, at $4.40, dropped sharply from the 1984 price of $6.70.

Indiana peppermint production of 182,000 pounds of oil was down 37 percent from the previous year. Acres harvested totaled 5,500, down 1,700 acres from 1984. The yield of 33 pounds per acre was 7 pounds less than the previous year. However, the price per pound, at $11.70 was up $1.70 from 1984. Spearmint production was 107,000 pounds, 31 percent lower than 1984. Acreage harvested was 3,700, off 300 acres from the previous year. The yield was 29 pounds per acre, a 10 pound decrease from a year ago. The price per pound, at $13.10 was was down 70 cents from 1984.

Indiana's 1985 peach production was virtually nonexistent because of winter freeze damage.

Indiana's sorghum grain estimate were discontinued after the 1984 crop.

The estimated rye production was 308,000 bushels, down 8 percent from the previous year. Rye acres for harvest were 11,000, a 1,000 acre decrease from 1984. The 28 bushel per acre yield, the same as last year, is a record high topping the 27 bushels realized in 1971 and 1983. The average price per bushel, at $2.20 was down 5 cents from a year ago.

FRUIT CROP SUMMARY

Indiana's total apple production of 75 million pounds for 1985 was up 17 percent from 1984. The price per pound was 13.1 cents, unchanged from the previous year. Total value of the 1985 apple crop came to $9.8 million up 17 percent from 1984, but down 5 percent from the record high set in 1982.

Peach production in Indiana in 1985 was virtually wiped out due to winter freeze damage.

1/ In orchards of 100 or more trees of bearing age.
2/ No significant commercial production because of winter freeze.

Flowering and Bedding Plants Summary
Indiana's 1985 Production and Value

Indiana's wholesale value of all flowers, foliage plants and bedding plants sold by commercial producers in 1985 totaled $30.6 million. Crops surveyed in 1984 were limited to chrysanthemums, roses, snapdragons, potted poinsettias, potted geraniums, potted lilies, potted hydrangeas, and bedding plants, rather than all plants as in 1985. To make comparisons, the 1985 wholesale value of those same crops which were surveyed in 1984 totaled $23.8 million, a 7 percent increase over the $22.2 million for 1984.

The number of commercial producers in Indiana continues to decline, a trend started in recent years. Largest decline was for potted chrysanthemums and hydrangeas and bedding plants. Value of sales were up substantially for hybrid tea roses, up 21 percent, flowering bedding plants, up 22 percent, potted lilies, up 11 percent, potted poinsettias, up 10 percent and potted geranuims, up 1 percent. These increases more than offset declines in value for standard chrysanthemums, off 18 percent, pompon chrysanthemums, off 6 percent, potted chrysanthemums, off 13 percent, sweetheart roses, off 21 percent, snapdragons, off 2 percent, potted hydrangeas, off 3 percent, and vegetable bedding plants, off 9 percent.

Indiana's most valuable floriculture crop was hybrid tea roses with a value of sales amounting to $9.02 million. Flowering bedding plants were second with sales at $3.7 million. Sweetheart roses with sales of $2.3 million were third followed closely by potted geraniums, also $2.3 million, and potted poinsettias at $2.2 million.

Estimates for 1982 and 1983 were discontinued for budgetary reasons but at the request of the industry were reinstated in 1984.

All data summarized reflect information furnished by commercial floricultural producers. A commercial floricultural producer is defined as one who has $10,000 or more in gross sales of cut flowers, flowering and foliage plants, bedding plants, or cultivated florists greens, and who produces one or more of the crops surveyed.

The "area used for production" is defined as the "gross" area used, including walkways and aisles. This includes that area used for growing floricultural crops under glass, plastic, cloth, lath, or outdoors. The area is counted only once if refilled several times with the same crop during the year, but if the area is refilled with different crops, it is reported under each crop grown.

INDIANA LIVESTOCK SUMMARY

The total value of the four major species of livestock and poultry on Indiana farms January 1, 1986 (December 1, 1985 for swine and chickens) amounted to $976.6 million, down 4 percent from the $1.022 billion a year earlier.

Cattle numbers were down 3 percent in 1985 but value per head at $395 was the same as a year ago. Total cattle inventory value, at $620.2 million, declined 3 percent from the $639.9 million last year. Cows and heifers that have calved totaled 605,000 head, 5 percent fewer than a year earlier. Of this total, 400,000 were beef cows (down 9 percent) and 205,000 were milk cows (up 4 percent).

Hog and pig numbers (December 1, 1985), at 4.15 million, were down 3 percent from a year earlier and the average value per head decreased from $78.00 in 1984 to $76.00 in 1985. This dropped the total inventory value to $315.4 million, 6 percent less than a year ago. Indiana remained third in the nation in the number of hogs on hand December 1.

Indiana sheep producers had 9 percent fewer sheep and lambs than a year earlier. Stock sheep totaled 92,000 head--a record low. Average value per head increased $6.00 from a year ago to $67.50 but total inventory value at $6.8 million was slightly below the previous year.

Total chicken inventory, at 28.6 million birds, was a record high. With this inventory, Indiana ranked second in the nation for both total chickens and hens and pullets of laying age (21.9 million). The total value of the chicken inventory was $34.3 million, down 15 percent from 1984. The value per bird decreased 25 cents from the previous year to $1.20 as of December 1, 1985.

HOGS AND PIGS

The total pig crop in 1985 was 1 percent smaller than in 1984. Sows farrowed in 1985 decreased 1 percent while litter rate averaged 7.65 pigs, the same as a year earlier. A $3.40 decrease in average price per hundredweight more than offset a 2 percent increase in pounds marketed resulting in cash receipts of $705 million, 5 percent lower than in 1984. Gross income (cash receipts plus value of home consumption) also declined 5 percent from a year earlier.

CATTLE

The number of cattle and calves marketed in 1985 increased 6 percent from a year earlier and was slightly above the 1983 level. The 1985 average price for cattle dropped $5.30 per cwt. to $48.90. Calf prices for 1985 averaged $55.40 per cwt. compared with $52.00 in 1984. Cash receipts for 1985 totaled $300 million, down 2 percent from the $305 million a year earlier. Gross income (cash receipts plus value of home consumption) also showed a 2 percent decline from 1984 to 1985.

SHEEP, LAMB AND WOOL PRODUCTION

The number of sheep and lambs marketed in 1985 increased 9 percent to 86,000 head. The total pounds of sheep and lambs marketed was 11 percent more than the 1984 level. Cash receipts totaled $4.4 million, up 33 percent from $3.3 million in 1984. Gross income (cash receipts plus value of home consumption) totaled $4.8 million in 1985 compared with $3.7 million a year earlier. Sheep averaged $22.30 per cwt. and lambs averaged $63.10 per cwt. during 1985.

Lambs saved in 1985 decreased 4 percent from the previous year to 98,000 head. The number of ewes one year old and older on hand January 1, 1985 declined 1 percent from 1984. Lamb crop per 100 ewes one year old and older was 126 during 1985 compared with 129 a year earlier.

Wool production declined 10 percent in 1985 to a record low 660,000 pounds. Sheep and lambs shorn totaled 101,000 head. The average fleece weight was 6.5 pounds. Total value of shorn wool was $271,000--down 27 percent from a year earlier. Wool averaged 41 cents per pound in 1985.

1/ Adjustments made for inshipments and changes in inventory.
2/ Excludes interfarm sales.
3/ Includes receipts from marketings of farm slaughtered meat.

CHICKEN, EGG AND TURKEY PRODUCTION

Total value of production from eggs totaled $244.6 million in 1985, down 16 percent from a year earlier. The average number of layers at 21,303,000 was 8 percent greater than in 1984, and the average rate of lay was up 3 percent to 260 eggs per layer, resulting in an 11 percent increase in total egg production during 1985. The average price received by producers for eggs was 53.0 cents per dozen compared with 70.0 cents a year earlier.

FARM INCOME AND PRICES

Indiana farmers received $4.6 billion in cash receipts from farm marketings in 1985, a 9 percent increase from 1984. Cash receipts from crops were up 18 percent from the previous year while receipts from livestock and livestock products were down 4 percent. Marketing of crops at $2.9 billion, accounted for 62 percent of the total cash receipts in 1985 while livestock receipts, at $1.7 billion, accounted for the remaining 38 percent. In the previous year crop receipts accounted for 58 percent and livestock 42 percent of total cash receipts.

Feed Crops in 1985 were the leading source of income for Indiana farmers and amounted to $1.64 billion. Corn is the major component of feed crops. Meat animals were second at $1.01 billion. Soybeans were third at $929.8 million. Poultry and eggs were the fourth leading contribution to farm income with $402.3 million and dairy products fifth with $303.4 million. These five commodity groups accounted for 93 percent of the 1985 cash receipts.

Cash receipts from meat animals were down 3 percent; feed crops were up 44 percent; soybeans were down 1 percent; poultry and eggs were down 9 percent; dairy products down 1 percent; and food grains down 30 percent.

Hectare = 2.471 acres = 10,000 sq. meters
1 Meter = 3.28 ft.

LIST OF AVAILABLE REPORTS

The Indiana Agricultural Statistics Service publishes official estimates of crop and livestock production, prices received and paid by farmers, and various other special reports. The reports containing such data and the approximate date of release are shown in the following table. These reports are available by submitting a subscription notice together with the subscription fee to:

Agricultural Statistics Board Publications
Room 5829 South Building
U.S. Department of Agriculture
Washington, D.C. 20250

MAKE CHECKS OR MONEY ORDER PAYABLE TO: USDA-NASS

Name of Report	Frequency Of Reports	Annual Subscription Fee
INDIANA AGRICULTURE REPORT: A four page consolidated report issued at the first and the middle of each month bringing together the latest statistics on crop production including: crop reports, grain stocks, cropping practices, crop varieties, tobacco, fruit crops, and vegetable crops; and livestock statistics covering: hogs and pigs, cattle and calves, sheep and lambs, wool, livestock slaughter, dairy, and chickens and eggs. Also covered are: prices received and paid by farmers, number of farms and land in farms, land values, cash receipts, and cold storage.	Semi-monthly	$10.00
WEATHER-CROP REPORT: A weekly progress report issued each Monday from April through November covering planting and harvesting activities, crop development, weather data, and timely crop management information.	Weekly	$12.00
COUNTY ESTIMATES: Issued each Spring, a county by county breakdown of harvested acres, yield and production for major crops and for livestock inventories.	Annual	$ 5.00
